Business & 3D Partnership ***Designing a Store***

In the “Real world,” it’s required that different types of businesses work together. A business owner might need the assistance of a Graphic Designer to create a logo for the business, or an architect might seek out help from a builder to complete building plans for a new building.

With this project, 3D Animation students and Business students are going to exchange skills and resources to accomplish a common goal – designing a store. The Business students have been working on building a business from the ground up, including plans for their business’ building. They are calling on the assistance of the 3D Animation students to create a rendering of what the outside of their store will look like when build – in 3D.

By utilizing the plans provided by the Business students, working out logistical details, and staying on task to get the job done, you’ll be able to complete the building design that is suitable to you and your business partner.

3D Animation Student: _____

Business Student: _____

Criteria:

Due Date: _____

Outside Design (200 points): The outside of the building must be completed to reflect the look of the Business student’s plans. Some changes may be made to make the building more suitable to 3D design.

_____ **50 Points:** Outside walls with surfacing or texture and roof.

_____ **25 Points:** Doors and windows with the appropriate surfacing.

_____ **25 Points:** Simple landscaping near the building with parking.

_____ **25 Points:** A simple background in Layout that contrasts the building’s color.

_____ **25 Points:** The business name on the outside of the building.

_____ **50 Points:** Rendered in Layout with antialiasing and printed in color.
